TO CITY CLERK FOR PLACE... REGULAR COUNCIL AGEND...

#72 JUN 17 1994

MOTION

Technological advances being made in the waste management industry require us to review and revise major components of our refuse collection processes and systems in order to achieve greater efficiency and cost reduction.

The increased use of automated refuse containers, for example, should cause us to rethink the entire refuse example, should cause us to rethink the entire refuse transportation function because the key benefit to be derived from automation is the ability for these trucks to have a quick turn around time. The closer they are to their delivery point, the sooner they can unload and return to pick up more trash.

We must therefor review our automated trash collection transportation system: including how we might increase the number of trips per truck by establishing more centralized transfer stations; what the comparative costs per mile of transportation would be if we had more centralized locations; what the maintenance cost savings per mile would be if the trucks made more frequent but shorter trips; how much more trash could be picked up as a result of shorter trips; and any other efficiencies as well as environmental benefits which might result.

An analysis of the transportation system should take into consideration information received as a result of the RFP/RFB currently underway for private disposal options.

I THEREFORE MOVE that the Department of Public Works be requested to review our automated trash collection transportation system and to report to the Governmental Efficiency Committee on what efficiencies can be implemented and what environmental quality increases can be achieved by readjusting and reconfiguring our trash collection transportation systems, including trip reduction, equipment maintenance cost savings, and more centralized transfer locations.

PRESENTED BY Richard Alarcón
Richard Alarcón
Councilman, 7th District

SECONDED BY Jackie Goldberg

JUN 22 1994 - REFERRED TO EQ & WM COMTE
